Take Home Test

Create a captivating website leveraging the `JSONPlaceholder` (https://jsonplaceholder.typicode.com/) API as your backend infrastructure **within 1 week**.

Key Requirements:
• Employ **Next.js** as your React Framework to ensure seamless performance and scalability.
• Choose a UI template that not only boasts an appealing design but also prioritizes swift performance.
• Implement a comprehensive **CRUD feature** within the user interface. Note that the API remains mock, eliminating any actual alterations.

Bonus Points:
• Develop unit tests.
• Employ React state management techniques to streamline data flow and enhance user experience.
• Enhance the project's robustness with the adoption of Type-safe TypeScript, ensuring code correctness and maintainability.
• Please upload your code to a public repository on GitHub and share the link.
• The dashboard! A beloved tool indeed. Feel free to craft the dashboard using mock data, ensuring it's closely tied to the subject matter at hand.

If sharing the GitHub link isn't feasible, kindly compress your homework into a zip file and forward it to us. We're eagerly anticipating your stunning website.
